Standardization Test Exercises

Madam Sauce's Mama Put

Overview

Congratulations! The year is 2021 and you have been given a job as a backend developer with Madam Sauce's Mama Put, the best tasting mama put in the continent.

Problem Statement

Madam Sauce's kitchen is a growing business. Her target customers are the staff of the very prestigious Genesys Tech Hub. Because her customers eat varieties of food and have plenty of money (they work at Genesys Tech Hub), she finds it difficult planning what she cooks for a day. She currently takes orders via phone calls but that doesn't seem to be working too.

Your first task as a backend developer, should you choose to accept it, is to build a platform for Madam Sauce's kitchen where she can showcase her daily meals and also take orders from customers.
